

Ideation Phase: Empathize & Discover

Date: 28 September 2026 **Project**

Name: Streamlining IT Procurement (Flow Designer)

Team ID: SWTID-2026-4282

Maximum Marks: 4 Marks

Empathy Map Canvas: This tool captures knowledge about an enterprise employee's behaviours, attitudes, and challenges when ordering a standard corporate laptop under the legacy manual procurement process. By mapping their perspective, we can design an optimal automated workflow using ServiceNow Flow Designer.

What does he THINK & FEEL?	What does he SEE?
• Will my laptop arrive before my project kick-off? • This manual process feels completely outdated for an IT company. • I worry my request got lost in an email chain somewhere. • Aspirations: Wanting a single-click ordering portal like Amazon.	• A cluttered inbox full of generic procurement ticket emails. • Other modern apps processing transactions instantly while IT lags. • No visual tracker or fulfillment bar showing current order stage.
What does he HEAR?	What does he SAY & DO?

- Managers saying: 'I haven't received any approval token link yet.'
- Peers complaining: 'It took me three weeks to get my replacement laptop.'
- IT support saying: 'We are completely swamped with procurement forms manually.'

PAIN (Fears, Frustrations, Obstacles)

- Severe bottleneck waiting for sequential manual managerial approvals.
- Zero transparency over asset delivery milestones.
- Lost engineering productivity due to hardware downtime delays.

- Frequently pings IT support channels for manual status updates.
- Says: 'Can someone please speed this up? I can't run my local compiler.'
- Submits multiple duplicate requests out of confusion.

GAIN (Wants, Needs, Success Measures)

- Instant auto-approvals triggered for standard hardware profiles.
- Real-time visual tracker embedded within the employee portal.
- Seamless direct API handshake with delivery vendor dispatch systems.
