

Project Development Phase

Model Performance Test & Technical Report

Date	28 September 2026
Team ID	SWTID-2026-4282
Project Name	Streamlining IT Procurement: Automating Standard Laptop with Flow Designer
Maximum Marks	4

Project Topic Overview

This project focuses on automating and streamlining the manual IT procurement lifecycle for standard laptop provisioning within an enterprise architecture. By leveraging ServiceNow Flow Designer, the manual workflows of request collection, multi-stage approvals, inventory verification, and operational deployment are automated into an error-free, highly efficient, cloud-based digital pipeline.

Model Performance Testing Matrix

Project team documentation regarding integration, data parameters, and structural design configurations:

S.No.	Parameter	Technical Specifications / Value Logs / Status
1	Data Rendered	Successfully rendered 1,200 transactional logs of historical IT procurement request items (RITM). Data includes user profiles, assets, hardware configurations, and lifecycle timestamps.
2	Data Preprocessing	- Normalized categorical variables (Laptop models: Standard vs Advanced). - Standardized date-time objects for turnaround time (TAT) calculation. - Handled missing fields in older historical manager approval rows.
3	Utilization of Data Filters	- Active staging filters configured to isolate active pipeline requests from completed or canceled orders. - Department-wise slicers configured for granular process delay monitoring.
4	DAX Queries Used / Scripting	<code>Average_Fulfillment_Days = AVERAGEX(ProcurementTable, ProcurementTable[ClosedDate] - ProcurementTable[OpenedDate])</code> <code>SLA_Compliance_Rate = DIVIDE(COUNTROWS(FILTER(ProcurementTable, ProcurementTable[Duration] <= 3)), COUNTROWS(ProcurementTable), 0)</code>
5	Dashboard Design	No of Visualizations / Graphs: 6 Total - KPI Cards (Total Requests, Avg Fulfillment Time, Active Approvals) - Bar Chart (Bottlenecks by Department Approver) - Donut Chart (Allocation status of laptop stock)

6	Report Design	No of Visualizations / Graphs: 4 Total • Trend Line (Monthly volume of laptop requests) • Matrix Table (SLA breach metrics grouped by regional fulfillment centers)
---	---------------	--

Automated Flow Architecture (Flow Designer Steps)

1. **Service Catalog Trigger:** User submits a request for a standard laptop.
2. **Dynamic Manager Approval:** Flow rules automatically locate and ping the user's manager for digital sign-off.
3. **Asset Inventory Verification:** System automatically checks the stock room records.
4. **Task Automation:** If in stock, an automated task is pushed to the IT asset fulfillment agent. If out of stock, a vendor purchase order trigger is initialized immediately.
